

Australian Productivity Council

PRODUCTIVITY

Getting more, from less. This is the prime objective of productivity improvement. How well it is achieved will determine the profitability, and ultimately the survival, of any business operating in a competitive economy.

Productivity improvement is challenging work. It demands both generalist and specialist expertise. It requires independent, critical and innovative approaches to the design of organisations, processes and products.

It requires careful and methodical optimisation of that which is already in place.

Our business offers a comprehensive range of expertise to support the productivity improvement effort. It provides productivity analysts and technical specialists at competitive prices; people with the knowledge, independence, clarity and commitment needed to manage productivity improvement.

These experts can be assigned to your business for a few days, for an extended period, or as a continuing part-time supplement to your human resources.

Our productivity improvement methodology has been developed and refined over many years to provide business with an efficient, effective, economical and flexible way to acquire the expertise that it needs.

Since its foundation in 1969 the

Australian Productivity Council has completed thousands of improvement projects, in businesses of every size, type and industry sector, throughout Australia and overseas. These have analysed and measured productivity, introduced new management techniques, trained employees, designed and installed new production facilities, engineered new products, implemented and maintained efficient quality, safety and environmental systems.

“Getting more, from less....is the prime objective of productivity improvement.”
